Five minutes, with an honest capacity gap

Frozen inputs and real local UI. No scoring weights or presets changed.

10,000

simulated people / 30 directed OD pairs / 44 shared resources

0:00 Routes - local API and prepared frontend

1:00 Older M0 negative benefit - retain the result

2:00 P3 normal - 0% delay reduction

3:00 P3 stress - 10% invented capacity sensitivity

4:00 Gap, units and assumptions

Seed: 20260922

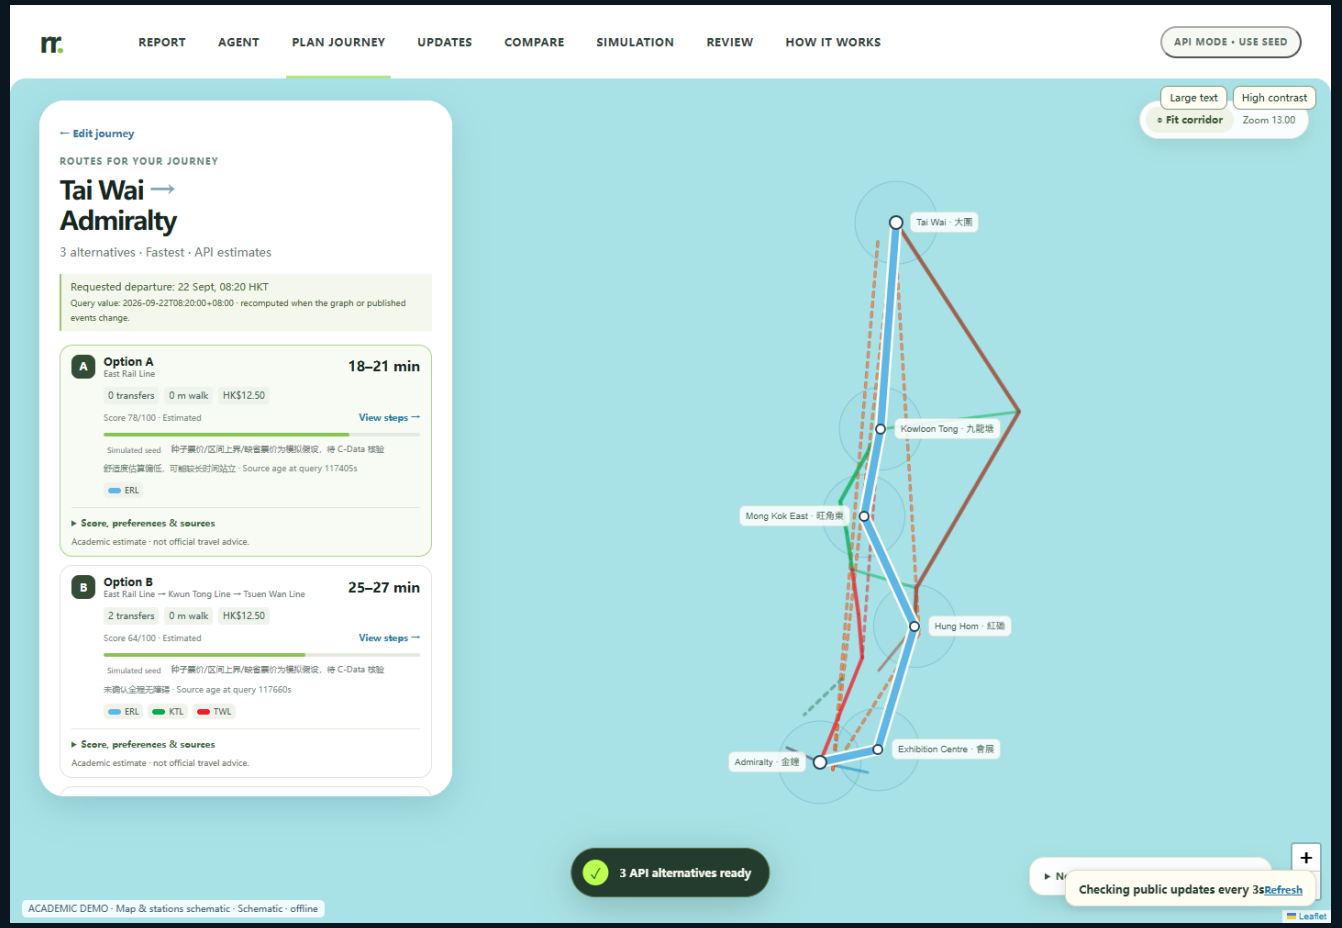

Window: 60 minutes

No live passenger loads

No production timing claim

0:00 - Query a modelled journey

Tai Wai -> Admiralty / 2026-09-22 08:20 HKT / unchanged Commuter + Fastest

Actual local API response

All browser WAN blocked

Network overlay remains usable

Live tiles are not required

HTTP P95: 61.5 ms

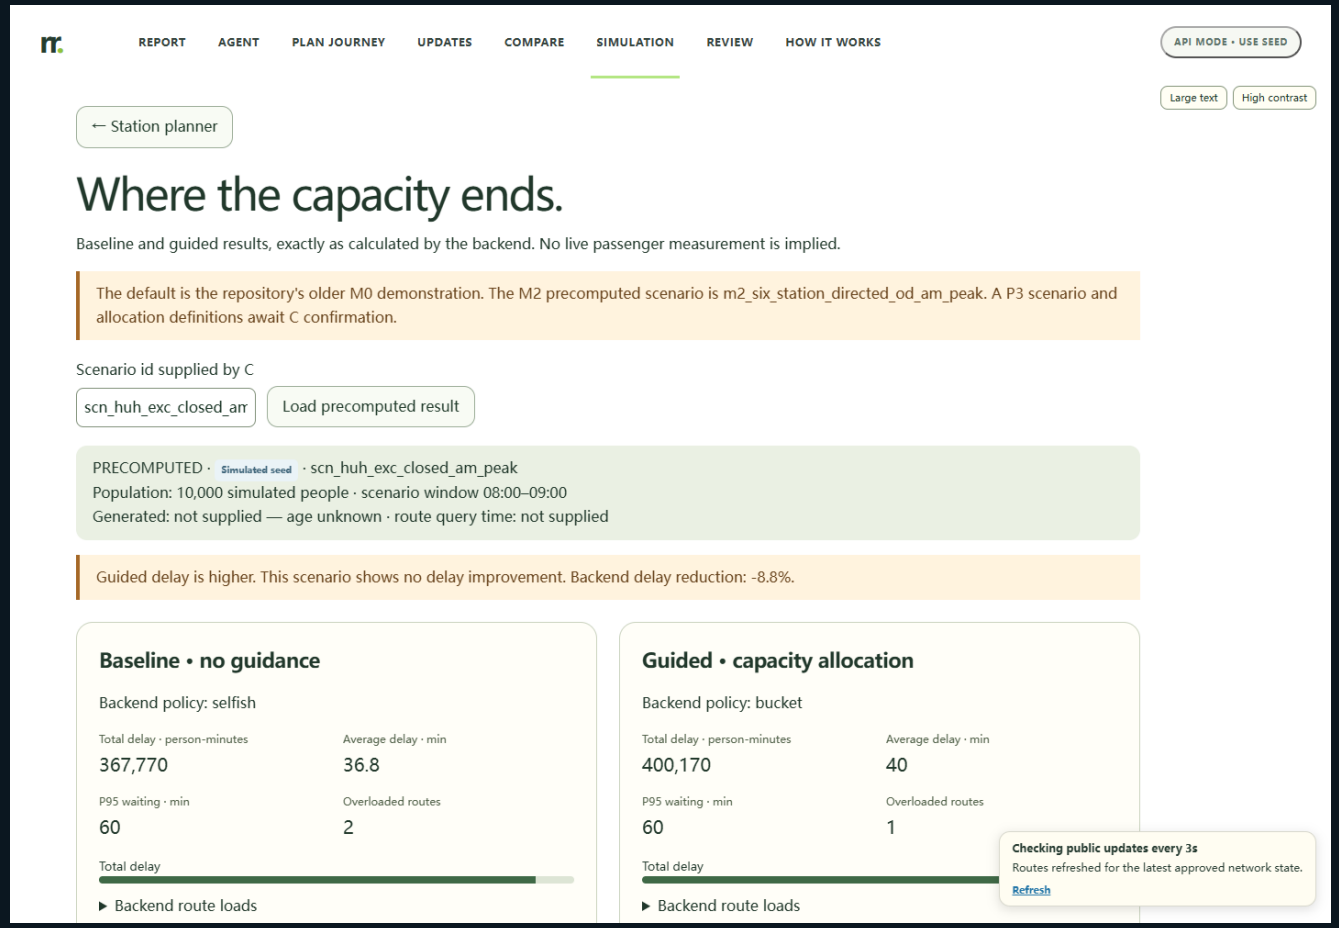

Samples: 60

Target: <= 1,500 ms

Production: not verified

1:00 - Keep the negative result visible

Older M0 fixture: scn_huh_exc_closed_am_peak. This is not the P3 shared-segment scenario.

Displayed from stored API data

No injected replacement values

No retuning for a better chart

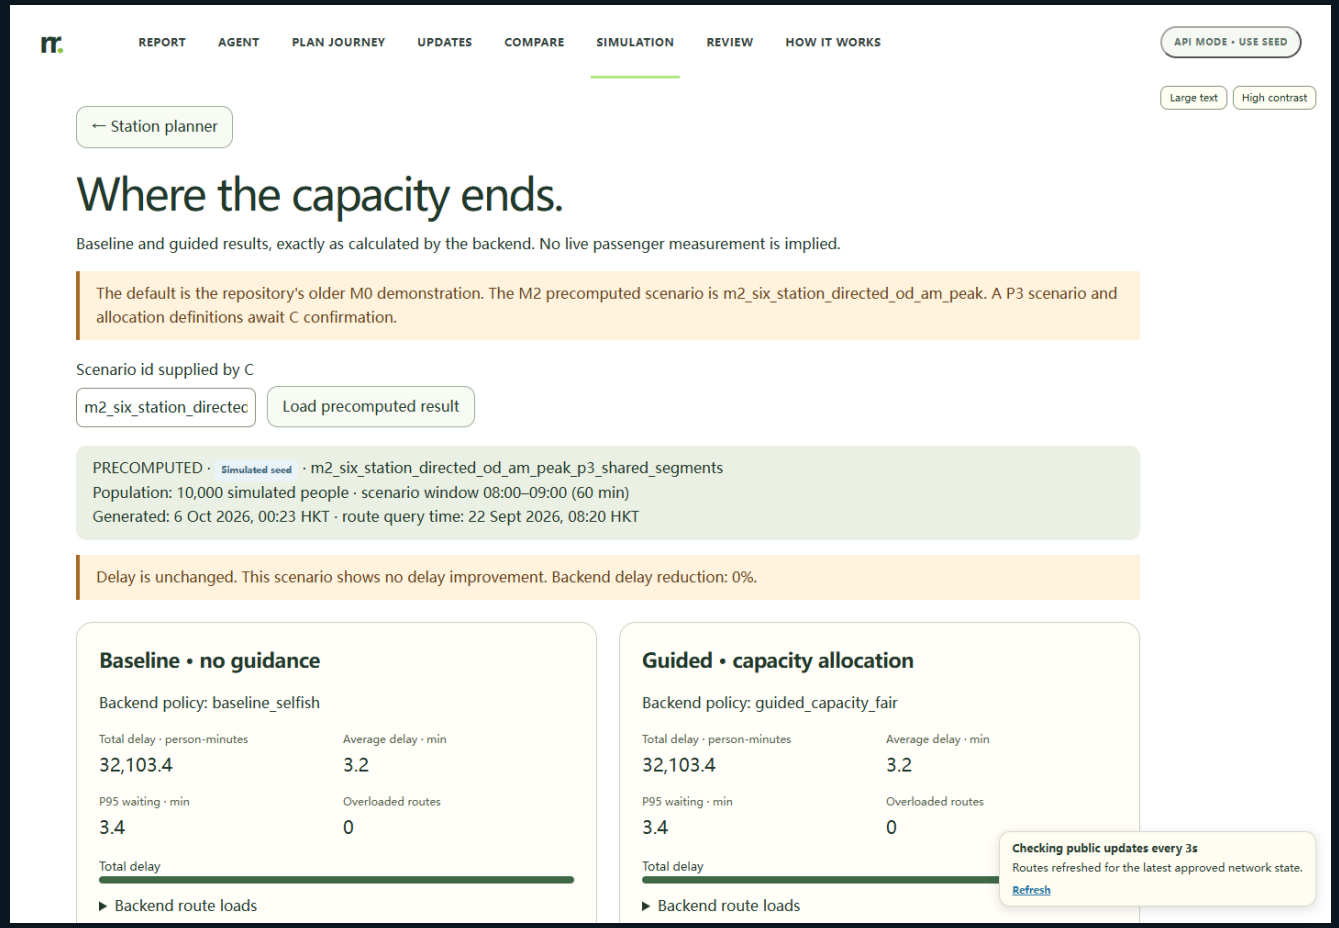

Delay reduction: -8.8%

Negative means guided is worse

State the model boundary

2:00 - Normal capacity: no benefit

P3 shared directed segments / same frozen population, policy and seed

Baseline / guided

Delay: 32,103.4 / 32,103.4

Unit: person-minutes

Served: 10,000 / 10,000

Unmet: 0 / 0

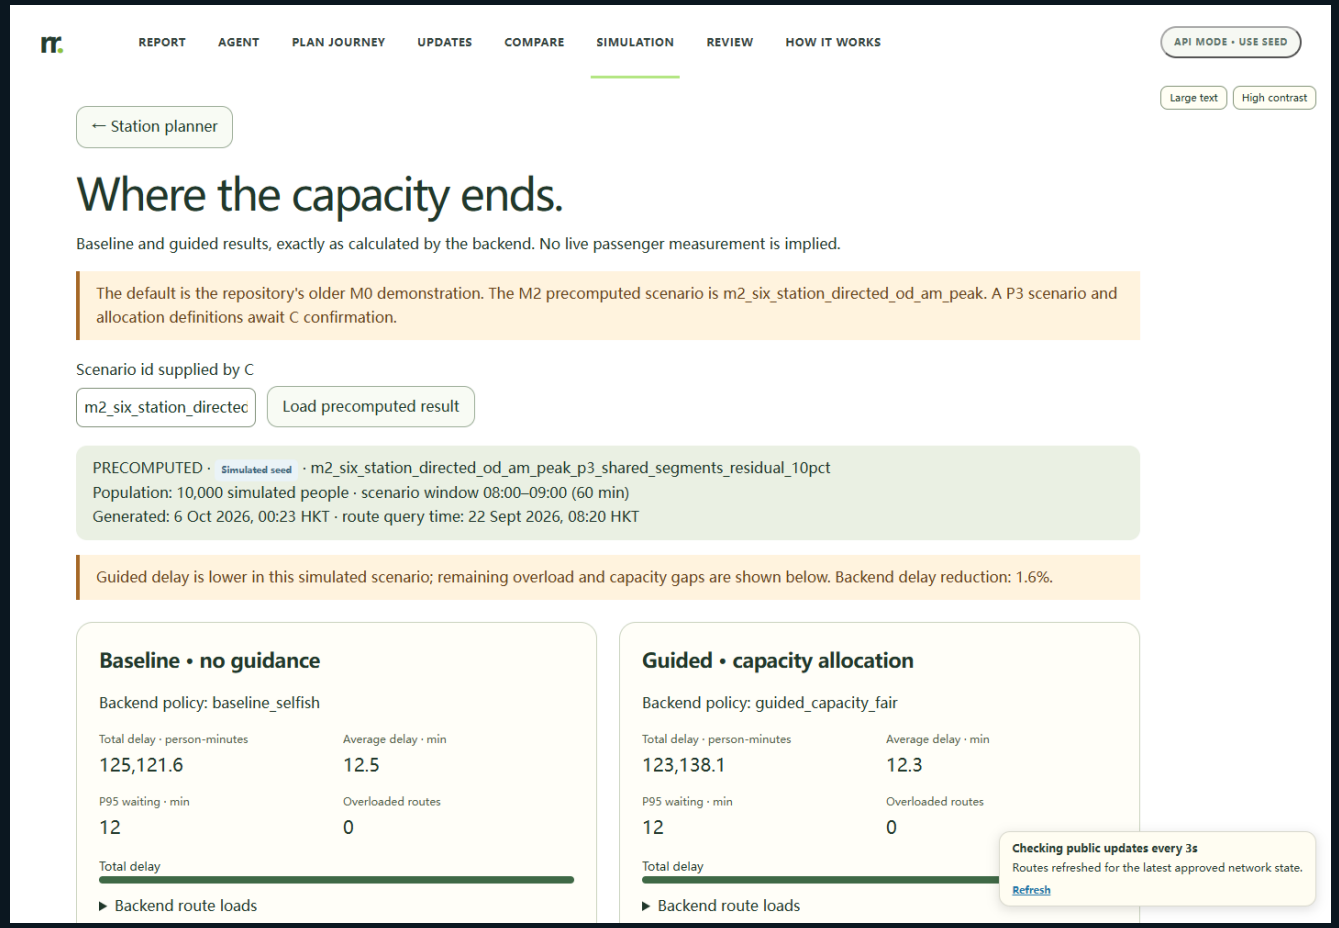

Delay reduction: 0%

Three repeat runs match

No benefit is a valid result

3:00 - Stress capacity exposes the gap

10% of simulated segment capacity - invented sensitivity, not observed spare capacity

Baseline / guided

Delay: 125,121.6 / 123,138.1

Unit: person-minutes

Served: 9,690 / 9,801

Unmet: 310 / 199

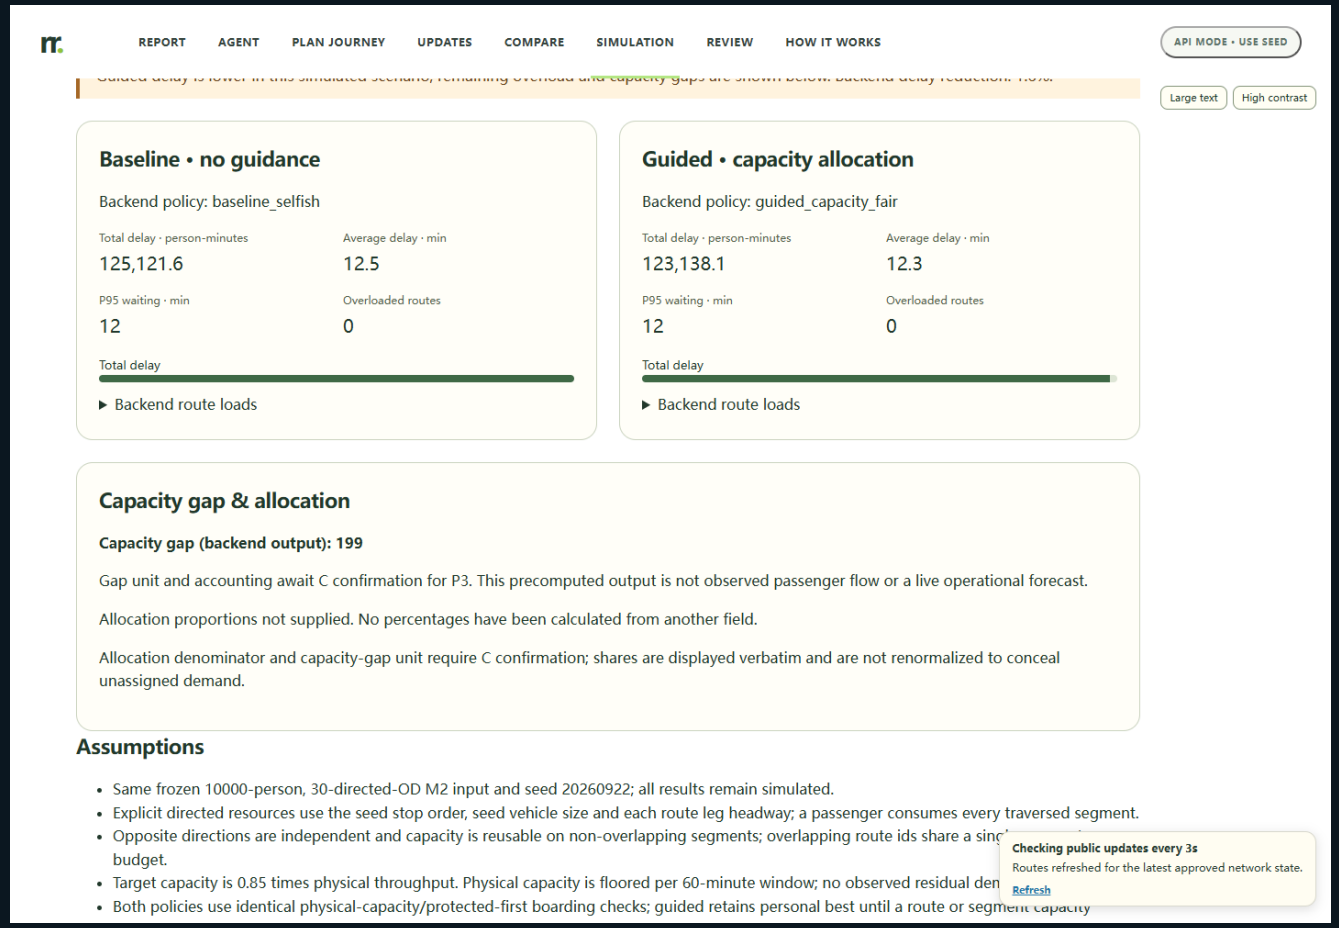

Delay reduction: 1.6%

Overloaded segments: 6 / 0

Gap remains visible

4:00 - State what the model cannot establish

Fallback: local UI -> five-minute demo.webm in Edge/Chromium -> this PDF in a local reader

No observed external passengers

No wheelchair berth guarantee

No train-by-train seat model

No multi-window carryover

Queue wait is an approximation

Source: checked-in P3 results

Environment: local isolated

CI / production: separate records

Final pitch deck: A + reviewer

Build base SHA: d952216cd6360c73fc01b17e6e8b4de30865f045 (working changes recorded in package manifest)
